Activity Report: Suhas AGGARWAL
Period: October 2010 – March 2011
Ref: CISTER/BI/02/10
work under SENODS Project (CMU-PT/SIA/0045/2009)

The report summarizes the research activities carried out by Suhas Aggarwal as a researcher of the Research Center in Real-Time Computing Systems IPP-HURRAY/CISTER (FCT UI 608).

The activities were focused on the study of wireless sensor networks architectures for large-scale environmental and power data gathering in a data center.

Details of activity:
   a. Study of different architectures suitable for large-scale data gathering in a data center.
   b. Study of protocols applicable in the architecture.
   c. Identification of available software implementations suitable for the architecture.
   d. Analysis and test of available software.
